Why do we use locks?
Why do we use locks?
Just to keep things safe and secure?
High Security Locks and Safes

you can keep the contents of a room safe by wielding a heavy steel door shut…
... or walling up the opening brick and mortar
High Security Locks and Safes

Locks are a delicate balance
High Security Locks and Safes

There are huge, safe doors at banks or the entrance to NORAD mountain... They are heavy duty but they require massive cost and effort to install, operate, and administrate.
then there is your typical master padlock... which is a breeze to use, quick to snap shut, and fast to open... too fast, since any dimwit with a shim or a bolt cutter can bypass it
Popular high security locks attempt to go beyond the basics of what's found in standard designs and offer the user strong security without massive hardware or outrageous installation costs.
